DevOps Engineer | jobs@example.com | +1 555 0100 | Example City

Summary

DevOps engineer who builds reliable delivery pipelines and runs Kubernetes platforms on AWS.

Experience

DevOps Engineer, Keystone Health Tech (2022 - present)

- Operate three Kubernetes clusters on AWS EKS for about 60 microservices.
- Built GitHub Actions pipelines with automated tests, security scans and canary deployments.
- Wrote Terraform modules for networking and databases, reviewed by a platform guild.
- Reduced noisy alerts by 60% by replacing CPU-based paging with latency and error-budget alerts.

Systems Engineer, Ardent Hosting (2020 - 2022)

- Managed Linux servers and automated provisioning with Ansible.
- Took part in an on-call rotation and wrote runbooks for the top ten incident types.

Skills

Kubernetes, Docker, AWS, Terraform, Ansible, GitHub Actions, Linux, Prometheus, Grafana, Python and Bash scripting

Education

BSc Computer Science, Mumbai University (2019)

Projects and other

Built an internal tool that shows deployment history and cost per service.
